EDUCATION

Georgia Institute of Technology

Bachelor of Science, Computer Science | GPA: 3.6/4.0

Atlanta, Georgia

Expected December 2026

EXPERIENCE

Waystar

Software Engineer II

Atlanta, Georgia

May 2026 – Present

- Led development of Waystar's production AI chatbot platform, architecting infrastructure for Retrieval-Augmented Generation (RAG), multi-tool agents, conversation summarization, and model reasoning views for client-facing healthcare billing use cases
- Collaborated directly with Anthropic engineers to design Opik-based chatbot evaluation workflows, analyze conversation success, and optimize AI quality, latency, and cost-performance through eval-driven iteration
- Developed patient-facing billing agent capabilities for healthcare clients, enabling patients to ask billing questions, retrieve payment information, navigate payment flows, and complete wallet transactions through conversational interfaces
- Built supporting platform capabilities for persistent sessions, conversation recall, concurrent chats, tool-call tracking/storage, and feedback capture, enabling session-based chatbot workflows at production scale
- Mentored and onboarded a co-op engineer through recurring one-on-ones, system walkthroughs, ticket creation, code review, and project guidance

Software Engineer I

August 2025 – May 2026

- Built an internal AI assistant powered by RAG that answers natural-language questions about code, APIs, and system behavior for product, support, and operations teams, used by 3,000+ employees
- Led and developed a dynamic, branded patient-side Progressive Web App (PWA) for healthcare payments and records used by millions of patients, generating the PWA manifest via a PHP backend, routing requests through a custom internal API, and persisting data in an AWS-hosted SQL database
- Reduced wallet site production exceptions by 95% by correlating FullStory user session replays with Kibana logs and error traces, identifying root causes across frontend and backend systems and shipping durable fixes

Software Engineer Intern

May 2025 – August 2025

- Designed and deployed an internal developer tool integrated with GitHub Copilot Agent Mode through a custom Model Context Protocol (MCP) server, enabling AI-assisted code translation 10x faster for 2,000+ engineers
- Developed and maintained the CAPN patient portal using PHP, MySQL, and Vue.js, delivering feature enhancements and production bug fixes in Agile sprints for a platform used by millions of patients

Georgia Institute of Technology

Undergraduate AI Researcher

Atlanta, Georgia

January 2025 – Present

- Conducted research on campus landmark recognition by developing a computer vision pipeline to identify Georgia Tech buildings from street-level imagery
- Built and curated a landmark image dataset from Google Street View and Maps imagery, clustering candidate locations with K-means and manually validating training samples
- Fine-tuned MobileNetV3Large for building recognition, evaluating failure cases across viewpoint variation, lighting, occlusion, and visually similar campus architecture

Enchanting Math Academy

Java & Python Instructor

Remote

January 2025 – April 2025

- Designed and taught original Java and Python lesson plans to introduce core programming concepts to students

SKILLS

Languages: Python, PHP, JavaScript, Go, SQL, Java

Frameworks/Cloud: React, Vue.js, Flask, AWS, Kubernetes, Docker, Jenkins

AI/LLM: RAG, MCP, Google ADK, Opik, prompt engineering, chatbot evaluation, GitHub Copilot Agent Mode

Observability/Data: Kibana, Grafana, OpenSearch, FullStory, Looker, MongoDB, Firebase
